

Horse Info	Genetics	FS Rating	FS Comments	CHI	Heart	Conclusion
<p>Unnamed Drumette x Tapizar 06 Apr 2016 Colt</p>	<p>Dirt/Turf</p>	<p>1-</p>	<p>Lacks scope, rather long body, slightly short between forelimb and hip and good hind limb shape. Grade 1 quality, borderline to graded.</p>	<p>117</p>	<p>A nice heart and considering he is by Tapizar, it is not too big. This is a Grade 1 capable cardio.</p>	<p>This is a Grade 1 capable colt on the data in this evaluation. He has some issues to his shape which could drop his Foto rating to Priority 2 if he grows in the wrong direction. However, if he grows the right way, he will more solidly hit the Grade 1 standard on shape.</p>

EAS Notes: CHI stands for Classic Heart Index. This is a number from 1 to 140 that represents the suitability of a colt's heart to the three year old Classic races. A CHI over 100 is typically Graded Stakes capable but the hearts that score closer to 120 or greater are better suited to races like the Kentucky Derby.

The FotoSelect® conformation evaluation rates horses on a score of 1 to 5 with Priority 1 being Grade 1 capable. Priority 2 is Graded Stakes capable, Priority 3 is Listed Stakes, Priority 4 is Allowance/Claiming and Priority 5 is Claiming. A plus or minus sign indicates that the horse is close to the higher rating (plus sign) or the lower rating (minus sign). However, each individual needs to be evaluated as it grows to determine it's Priority rating at that time. Some horses do not grow along traditional population growth graphs so it is always best to evaluate the individual as he grows to determine his potential level of racing performance. In any given year, 75-90% of Grade 1 winners are rated Priority 1 by FotoSelect® as yearlings.
